EDUCATION

Master of Science, Computer Science, [Missouri State University](#)

Aug 2026 - Expected Dec 2027

Bachelor of Science, Computer Science, Missouri State University

Aug 2022 - May 2026

GPA: 3.41 / 4.0, Minors: **Cybersecurity, Mathematics**

- Honors: Dean's List[2023-2026], Pete Sanderson CS Scholarship Recipient, International Excellence Scholarship.
 - LeetCode: 100+ problems solved & GitHub Achievements are Pull Shark X2, YOLO, Quickdraw.
-

EXPERIENCE

Software Engineering Intern | [eFactory](#) - [TuningSQL](#) | *Springfield, MO*

Jan 2026 - May 2026

- Designed and delivered a distributed worker-queue system in PHP and Python to route GPU inference jobs across a multi-server cluster, achieving a 40% reduction in average job wait time and enabling horizontal scaling with zero-downtime failover.
- Engineered an automated ETL ingestion pipeline (Python, PostgreSQL, PHP) to parse high-volume PDFs & technical whitepapers into structured records, eliminating more than 70% of manual preprocessing effort & unblocking non-technical staff workflows entirely.
- Optimized 8+ critical PostgreSQL schemas and query execution plans - including index restructuring and join reordering-reducing 80% data-retrieval latency from 900 ms to 180 ms (5× improvement) on production datasets exceeding 10M rows.
- Translated ambiguous business requirements into technical specifications through direct collaboration, delivering 3 internal tooling features on schedule with documented API contracts.

IT Infrastructure & Systems Engineering Intern | [CoxHealth](#) | *Springfield, MO*

May 2025 - Aug 2025

- Restored connectivity during a critical Aruba switch outage in a CV-ICU in under 15 minutes without interrupting patient-care systems.
 - Provisioned 20+ Cisco and Aruba network devices and supported hospital data-center refreshes under established security and change-control procedures, with no post-deployment audit findings.
 - Gained hands-on exposure to large-scale network topology, VLAN segmentation, and enterprise ticketing workflows, directly informing architecture decisions in subsequent distributed systems work.
-

PROJECTS

BankingApp | [GitHub](#) | [Live demo](#) | C#, .NET 10, ASP.NET Core, EF Core, SQL Server, Docker, Azure

Jan 2026 - Present

- Built a banking application with ASP.NET Core Minimal APIs and Razor Pages, sharing account workflows for deposits, withdrawals, and transaction history; implemented atomic transfers using EF Core database transactions.
- Implemented ASP.NET Core Identity cookie authentication, Customer/Admin roles, and account-level ownership checks; added xUnit unit and integration tests covering monetary validation, authorization boundaries, and failed transfers.
- Containerized the application with multi-stage Docker builds and deployed it to Azure Container Apps with Azure SQL persistence; configured GitHub Actions CI for builds, formatting checks, tests, and coverage reporting.

Orbi - AI Meeting Intelligence System | [GitHub](#) | Python, WhisperX, Pyannote, spaCy, Sentence Transformers *Apr 2026 - Present*

- Developed a modular audio-to-JSON pipeline combining speech transcription, word-level alignment, speaker diarization, transcript cleaning, and embedding-based topic segmentation.
- Preserved speaker labels, timestamps, and processing metadata through a configurable Python orchestration layer designed for downstream meeting analysis.
- Implemented unit and end-to-end tests using lightweight substitutes for expensive ML dependencies, validating transcript cleaning, topic-boundary detection, and pipeline integration.

Foundervers | [GitHub](#) | [Live demo](#) | Flutter, Postgres, Docker, Supabase, Cloudflare

May 2025 - Aug 2025

- Product Leadership & System Architecture: Architected and launched a scalable end-to-end platform for entrepreneurs, managing the full software development life cycle (SDLC) from concept to App Store deployment.
 - Iterative Product Development: Executed 13+ production iterations based on user feedback and engagement metrics to optimize UX.
 - Full-Stack Integration: Engineered a seamless financial ecosystem by integrating Stripe and Apple In-App Purchases (IAP) using a Dart frontend and backend. Security & Compliance: Implemented robust security protocols, including OTP, passwords, and PostgreSQL Row-Level Security, to ensure data integrity and user privacy.
-

TECHNICAL SKILLS

Languages: Python, C#, TypeScript, SQL, HTML, CSS

Frameworks & Libraries: ASP.NET Core, EF Core, Flask, Django

Databases: PostgreSQL, query optimization, indexing strategies, schema design

Infrastructure: Docker, Azure, GCP, GitHub Actions CI/CD, Git, Linux, REST API Design, Data Pipelines
