

RAJKUMAR KUSHWAHA

Springfield, MO, +1 (417) 512-3810, rajkk0213@gmail.com, [linkedin.com/in/rajkushwaha1](https://www.linkedin.com/in/rajkushwaha1), github.com/soyRex-codes

EDUCATION

B.S. Computer Science, Missouri State University *Aug 2022 - May 2026*
GPA: 3.41 / 4.0, Minors: **Cybersecurity, Mathematics**
Relevant coursework: Algorithms & Advance Data Structures (DSA), Operating System, Databases, AI/ML, Computer Architecture, Cloud Computing, Mobile Application, Computer networks.

ACHIEVEMENTS & RECOGNITION

- [2023-2026]: Dean's List, Pete Sanderson Computer Science Scholarship Recipient, International Excellence Scholarship Recipient]
- LeetCode: [Top 30% globally, 100+ problems solved]
- GitHub stars: Pull Shark X2, YOLO, Quickdraw].

EXPERIENCE

Software Engineering Intern | [eFactory](#) -[TuningSQL](#) *Springfield, MO, Jan 2026 - Present*

- Designed and deployed a distributed worker-queue system in Python & PHP to route GPU inference jobs across a multi-server cluster, achieving a 40% reduction in average job wait time and enabling horizontal scaling with zero-downtime failover.
- Engineered an automated ETL ingestion pipeline (Python, PostgreSQL, PHP) to parse high-volume PDFs and technical whitepapers into structured records, eliminating >70% of manual preprocessing effort and unblocking non-technical staff workflows entirely.
- Optimized 8+ critical PostgreSQL schemas and query execution plans - including index restructuring and join reordering-reducing 99% data-retrieval latency from 900 ms to 180 ms (5x improvement) on production datasets exceeding 10M rows.
- Translated ambiguous business requirements into technical specifications through direct stakeholder collaboration, delivering 3 internal tooling features on schedule with documented API contracts.

IT Infrastructure & Systems Engineering Intern | [CoxHealth](#) *Springfield, MO, May 2025 - Aug 2025*

- Triaged and resolved critical network outages on Aruba switches via CLI in zero-tolerance, life-critical environments (Cardiovascular ICU), restoring full connectivity in under 15 minutes without disrupting active patient care.
- Provisioned and configured 20+ enterprise Cisco and Aruba network devices across production hospital infrastructure, maintaining 100% HIPAA compliance across all deployed assets - zero post-deployment audit findings.
- Gained hands-on exposure to large-scale network topology, VLAN segmentation, and enterprise ticketing workflows, directly informing architecture decisions in subsequent distributed systems work.
- Deployed and configured Aruba 3810M, 7240xm, Cisco Catalyst switches, Ap's in production environments.
- Contributed to Hardware refresh initiatives at high-security data centers such (e.g., Blue Bird), upgrading and configuring critical infrastructure components including storage systems, firewalls, NICs, RAM and firmware.

PROJECTS

Boomer AI - LLM Fine Tuning & Full-Stack App | Python, PyTorch, LoRA, Flask, Flutter, Hugging Face, PostgreSQL *Aug 2025 - Dec 2025*

- Fine-tuned Meta Llama 3.1-8B using LoRA + SFTTrainer on a curated domain-specific corpus, achieving an 85% reduction in irrelevant model outputs while maintaining full inference capability on consumer-grade hardware (8 GB VRAM) - eliminating the need for expensive A100/H100 compute.
- Built an end-to-end data engineering pipeline to scrape, clean, deduplicate, and convert 8,000+ unstructured documents into structured JSON training datasets; reduced dataset preparation time from multi-day manual effort to under 3 hours fully automated.
- Architected and shipped a production inference stack - Flask REST API + cross-platform Flutter mobile client - serving real-time LLM responses to 200+ concurrent university users at launch, with async request handling designed for horizontal scale.

BankingApp | Enterprise-Grade .NET 10 Backend, C#, ASP.NET Core, EF Core, MSSQL, Docker, Azure, xUnit, GitHub Actions *Jan 2026 - Present*

- Implemented enterprise identity & access management via ASP.NET Core Identity with claims-based RBAC, JWT session handling, refresh token rotation, and full user lifecycle support - mirroring IAM patterns used at production scale.
- Architected async Minimal APIs following .NET 10 conventions with Serilog structured logging and RFC 7807 Problem Details error contracts, enabling consistent, machine-readable error surfaces and simplified on-call debugging.
- Achieved 90%+ unit and integration test coverage via xUnit, FluentAssertions, and Moq; containerized with multi-stage Docker builds and automated CI/CD to Azure App Service via GitHub Actions - zero manual deployment steps in the release pipeline.

Foundervers | Flutter(Dart), PostgreSQL, Docker, GCP, Supabase, Firebase *Springfield, MO, May 2025 - Aug 2025*

- Product Leadership & System Architecture: Architected and launched a scalable end-to-end platform for entrepreneurs, managing the full software development life cycle (SDLC) from concept to App Store deployment.
- Iterative Product Development: Executed 13+ production iterations based on user feedback and engagement metrics to optimize UX.
- Full-Stack Integration: Engineered a seamless financial ecosystem by integrating Stripe and Apple In-App Purchases (IAP) using a Flutter frontend and Python backend.
- Security & Compliance: Implemented robust security protocols, including multi-factor authentication and PostgreSQL Row-Level Security, to ensure data integrity and user privacy.

TECHNICAL SKILLS

Languages: C#, Python, JavaScript, TypeScript, SQL, HTML, CSS, Kotlin
Frameworks & Libraries: ASP.NET Core (.NET 10), EF Core, Flask, Django, React, PyTorch, Hugging Face Transformers
Databases: PostgreSQL, MSSQL, query optimization, indexing strategies, schema design
Infrastructure: Docker, Azure, GitHub Actions CI/CD, Git, Linux CLI
Core Concepts: Distributed Systems, REST API Design, Identity & Auth (RBAC / JWT), LLM Fine-Tuning (LoRA / SFT), Data Pipelines
